

ADAPTIVE PREFETCH OF I/O DATA BLOCKS

Abstract of the Disclosure

5 In an example embodiment, an adaptive method of prefetching data
blocks from an input/output device comprises predicting the address of each
read operation reading a data block from the input/output device, the
prediction based on the address of the immediately preceding read operation
from the input/output device; tracking, for each read operation, whether each
read operation reads a block data from the same address of the input/output
10 device predicted for the read operation; and prefetching a data block for a
read operation from the input/output device in accordance with the state of a
state machine, the state of the state machine depending upon whether
immediately preceding read operations read a data block from the same
address of the input/output device predicted for the read operations.
